About Wildlife Acoustics

Wildlife Acoustics specializes in wildlife audio recorders and software, specifically designed to capture vocalizations of birds, bats, frogs and other wildlife. Wildlife Acoustics has sold over 50,000 recorders in over 100 countries – helping researchers, universities and government agencies conduct species inventory, presence/absence surveys and habitat health monitoring.

Flying at night, using ultrasonic vocalizations — bats can be hard for people to detect. But with the sophisticated technology inside the affordably priced Echo Meter Touch 2, you can turn your smartphone into a professional-quality, interactive bat detector, allowing you to hear and record bats flying above you in real-time!

Features

- Listen to and record bat calls in real-time
- Identifies the most likely species of bats via the free Echo Meter Touch app for Android*
- View bat echolocations in real-time on a color spectrogram
- See recording locations and path on a zoomable map
- Share your discoveries easily via text and email

*Auto ID classifiers are currently available for species in North America, UK, Europe, Neotropics and South Africa
